

Portable 'CAF' Applications

Portable CAFS (compressed air foam systems) are being employed now throughout Europe, Asia and the Middle East, as shown below. Ideal for rapid deployment and knockdown, the fire fighter typically puts out over 70% of all fires safely - without the need to apply fire truck hoses. Ideal for stair access, entering houses, offices and factories and avoiding traffic congestion.

The fire fighter commonly shoots the CAF gun at the fire from a doorway and, due to the 15m range and high pressured foam expansion, the foam jet reaches all parts of the room rapidly extinguishing the fire.

CAF Backpack & breathing apparatus - **Europe** 1 x 10Litre

CAF Fire truck storage - **NT Australia** 1 x 10 Litre

CAF Backpack - **Germany** 1 x 10 Litre

CAF Rapid response - **Thailand** 2 x 10 Litre

CAF Rapid response - **Singapore** 1 x 10 Litre

CAF Airport fire truck - **Vienna** 1 x 50 Litre
